

« Monsieur Hay,
vous avez reçu
le mauvais
médicament »

**Comment intégrer les technologies de l'information
dans les processus. Barrières et facilitateurs.**

Hôtel Kreuz, Berne, jeudi 30 mars 2017

Statement 1

- ▶ Increased IT tools should support the medication process.

This by using standardised identifications so that physical information can be captured in the digital space

- ▶ Yes
- ▶ No
- ▶ Reformulate
- ▶ No opinion

Statement 2

- ▶ The caregiver is at the heart of the medication process in hospitals
 - ▶ IT implementation can only be successful if the full process has been thought through
-
- ▶ Yes
 - ▶ No
 - ▶ Reformulate
 - ▶ No opinion

Statement 3

- ▶ Prescription support tools must use information from knowledge databases **and** from patient's record. In such a way the prescriber doesn't get overwhelmed with unnecessary alerts.
 - ▶ Yes
 - ▶ No
 - ▶ Reformulate
 - ▶ No opinion

The End

Concluding remarks

...Concluding remarks...

- ▶ IT has to evolve so that it can benefit of the increasing number of standardised to be scanned
- ▶ Barcodes are useless... if not scanned
- ▶ Technologies have to be implemented in an intelligent manner (don't dream about «plug and play»)
- ▶ Each hospital has to define its own strategy. Without strategy, progresses are hazardous

Next steps together ?

▶ Interactive workshops (1/2 day)

- A. Bedside scanning
- B. Traceability (blood derivatives and beyond)
- C. Central pharmacy, stock entry and exit
- D. Ward pharmacies, automated dispensing cabinets
- E. Implementation of GS1 standards in an institution
- F. Fight against falsified drugs
- G. Electronic traceability of hospital preparations
- H. Cytotoxic process
- I. Traceability at the operating theatre
